

HYDRAULIC THUMBS

DO MORE - Enhance Your Excavator's Versatility with a Hydraulic Thumb

A hydraulic thumb is an essential attachment that transforms your excavator into a more versatile and efficient machine. By working in tandem with your bucket, a hydraulic thumb allows you to grab, hold, and manipulate materials with precision. This significantly increases your productivity and enables you to tackle a wider range of tasks with ease, from handling rocks and logs to clearing debris and scrub.

Features:

- **Serrated Blades:** The 2 blades have serrated edges providing superior gripping power, making it easier to handle rocks, debris, and other challenging materials.
- **Thumb parallel to dipper arm:** KNAPP Hydraulic Thumbs tuck up out of the way parallel to the dipper arm when not in use.
- **Quality Materials:** Manufactured from high quality Grade 350 steel and solid strengthening pins ensuring long-lasting performance.
- **Custom Made:** Measurements provided using the Knapp Thumb Measurement Instructions ensure that your Hydraulic Thumb reaches the end of the bucket and does not interfere with the boom when it is tucked up.
- **Easy to Install:** KNAPP Thumbs are equipped with a weld-on backing plate that can be easily attached to the dipper arm of your excavator. This allows for retrofitting to both new and used excavators, providing flexibility and convenience.
- **NZ Made:** Proudly manufactured in New Zealand including the hydraulic cylinder. We are ISO2001:2015 certified with ticketed welder fabricators.

Move the thumb to the position you want up to 135 degrees.

Move the bucket back and forward to secure what you are grabbing or picking up against the thumb.

When your KNAPP Hydraulic Thumb is not in use, it tucks away. A separate locking pin can be used to secure the thumb in place. If you do not need to use thumb for a long period of time, or you need to reduce weight on the dipper arm, you can unpin the thumb and remove it from its backing plate.

WHY A HYDRAULIC THUMB VS OTHER GRAB ATTACHMENTS?

A Hydraulic Thumb is the most versatile option for grabbing and picking up almost anything as it can be used with multiple buckets.

As your KNAPP Hydraulic Thumb tucks away when not in use, you have it on hand to use in any situation with whichever bucket you have on your excavator. You don't need to make sure you have a separate "Grab" bucket on site, nor do you need to change buckets. Simply extend your hydraulic thumb and you have an instant "grab attachment."

The KNAPP Hydraulic Thumb is ideal if you frequently need to pick up a variety of different objects.
